```
Southern blot analysis was performed using a bovine cDNA probe contg.

a fragment of a PI3-kinase-encoding sequence and human cDNA isolated
from a cDNA ilbrary constructed from mRNA isolated from the human
cell line KGla. Positive clones were sequenced to give the human
cell line KGla. Positive clones were sequenced to give the human
cell line KGla. Positive clones were sequenced to give the human
cell line KGla. Positive clones were sequenced to give the human
coll of human plus sequence shown. This sequence has 95 percent
loof of human plus sufficient to encode the kinase which will
associate with the p85 kinase subunit. The gene may be used to
correct mith plus kinase activity, and is useful for
screening for (ant)agoniers of PI3 kinase activity which could be
useful for stimulation or inhibition of cell proliferation and hence
prophylaxis or therapy. Platelet or neutrophil activity or blood
glucose levels can be controlled using the kinase.

a fragment of a P13-kinase-encoding sequence and human cDNA isolated

cf from a cDNA ilbrary constructed from mRNA isolated from the human

cell line KGla. Positive clones were sequence to give the human

cell line KGla. Positive clones were sequence to give the human

DISTAL STATES PLIO SEQUENCE. The domain encoding residues 19-

100 of human plio is sufficient to encode the kinase which will

associate with the p85 kinase subunit. The gene may be used to

provide a protein with P13 kinase activity, and is useful for

creaning for (ant) agonists of P13 kinase activity which could be

useful for stimulation or inhibition of cell proliferation and hence

prophylaxis or therapy. Platelet or neutrophil activity or blood

glucose levels can be controlled using the kinase.

Chydated on 25-WAR-2003 to correct P1 field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 ATGCCTCCAAGACCATCATCAGGTGAACTGTGGGGGGATCCACTTGATGCCCCCAAGAATC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel antisense compound (1) 8-30 nucleobases in length targeted to a start codon or nucleobases 4-3174 of the coding region of human P13 kinase pilobeta (II), in which (I) specifically hybridizes with and inhibite the expression of (II). The products of the invention have cytostatic, antiinflammatory and antiinflective activity. (I) is useful for inhibiting the expression of (II) in human cells or tissues. The antisense compound can be utilized for diagnostics, therapeutics, prophylaxis and as research reagents and kits. The antisense compounds may also be useful prophylactically, e.g. to prevent or delay infection, inflammation or tumor formation. The antisense compounds are useful for research and diagnostics, because these

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                  US-09-974-573-1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                              US-09-974-573-1
